Northbound Through the Snow

Mike Schaller photo

In 2005 Mike Schaller photographed this northbound train at Bel Alton Newtown Road on the ex-PRR Popes Creek Line. The first of three locomotives is CSX 803, an EMD SD80MAC built in February 1996 as Conrail 4108 with the frame number 946501-9. The train appears to be hauling empty coal hoppers from the Morgantown Generating Station which ceased coal burning several years ago. See also the photo of the line on the back page. Read about the SD80MACs in this High Green!
